Exp. Name: Design a C program which sorts the strings using array of pointers

Date: 2023-04-24

Aim:

S.No: 1

Design a C program that sorts the strings using array of pointers.

Sample input output

```
Sample input-output -1:
Enter the number of strings: 2
Enter string 1: Tantra
Enter string 2: Code
Before Sorting
Tantra
Code
After Sorting
Code
Tantra
Sample input-output -2:
Enter the number of strings: 3
Enter string 1: India
Enter string 2: USA
Enter string 3: Japan
Before Sorting
India
USA
Japan
After Sorting
India
Japan
USA
```

```
Execution Results - All test cases have succeeded!
```

Test Case - 1

User Output

#include<stdio.h> #include<stdlib.h> #include<string.h> void main()

> char *temp; int i,j,diff,n; char *strarray[10];

scanf("%d",&n); for(i=0;i<n;i++)

for(i=0;i<n;i++)

for(i=0;i<n-1;i++)

}

for(i=0;i<n;i++)

}

}

for(j=0; j< n-1-i; j++)

if(diff>0)

printf ("After Sorting\n");

printf("%s\n",strarray[i]);

}

printf("Enter the number of strings: ");

printf("Enter string %d: ",i+1);

printf("%s\n",strarray[i]);

scanf("%s",strarray[i]);

printf("Before Sorting\n");

strarray[i]=(char *)malloc(sizeof(char)*20);

diff=strcmp(strarray[j],strarray[j+1]);

strarray[j]=strarray[j+1]; strarray[j+1]=temp;

temp=strarray[j];

{

2

Test Case - 2
User Output
Enter the number of strings:
3
Enter string 1:
Dhoni
Enter string 2:
Kohli
Enter string 3:
Rohit
Before Sorting
Dhoni
Kohli
Rohit
After Sorting
Dhoni
Kohli
Rohit

Date: 2023-04-24

Aim:

Write a program to search a **key element** with in the given array of elements using linear search process.

At the time of execution, the program should print the message on the console as:

```
Enter value of n :
```

For example, if the user gives the **input** as:

```
Enter value of n : 3
```

Next, the program should print the messages one by one on the console as:

```
Enter element for a[0] :
Enter element for a[1] :
Enter element for a[2] :
```

if the user gives the input as:

```
Enter element for a[0] : 89
Enter element for a[1] : 33
Enter element for a[2] : 56
```

Next, the program should print the message on the console as:

```
Enter key element :
```

if the user gives the input as:

```
Enter key element : 56
```

then the program should print the result as:

```
The key element 56 is found at the position \ensuremath{\mathbf{2}}
```

Similarly if the key element is given as **25** for the above one dimensional array elements then the program should print the output as "**The key element 25** is **not found in the array**".

Fill in the missing code so that it produces the desired result.

Source Code:

```
LinearSearch.c
```

ID: 224G1A05B5 Page No: 4

```
#include<stdio.h>
int main()
{
   int a[10],i,j,n,flag=0;
   printf("Enter value of n : ");
   scanf("%d",&n);
   for(i=0;i<n;i++)
      printf("Enter element for a[%d] : ",i);
      scanf("%d",&a[i]);
      printf("Enter key element : ");
       scanf("%d",&j);
      for(i=0;i<n;i++)
      if(j==a[i])
         flag++;
         break;
     }
    }
    if(flag==1)
    {
      printf("The key element %d is found at the position %d",j,i);
   }
   else
    {
      printf("The key element %d is not found in the array",j);
   }
   printf("\n");
  }
```

```
Test Case - 1

User Output

Enter value of n:
4

Enter element for a[0]:
1

Enter element for a[1]:
22

Enter element for a[2]:
33

Enter element for a[3]:
44

Enter key element:
```

Test Case - 2
User Output
Enter value of n :
7
Enter element for a[0] :
101
Enter element for a[1] :
102
Enter element for a[2] :
103
Enter element for a[3] :
104
Enter element for a[4] :
105
Enter element for a[5] :
106
Enter element for a[6] :
107
Enter key element :
110
The key element 110 is not found in the array

Date: 2023-04-28

Aim:

Write a program to search a key element in the given array of elements using binary search.

At the time of execution, the program should print the message on the console as:

```
Enter value of n :
```

For example, if the user gives the input as:

```
Enter value of n : 3
```

Next, the program should print the messages one by one on the console as:

```
Enter element for a[0] :
Enter element for a[1] :
Enter element for a[2] :
```

if the user gives the input as:

```
Enter element for a[0] : 89
Enter element for a[1] : 33
Enter element for a[2] : 56
```

Next, the program should print the message on the console as:

```
Enter key element :
```

if the user gives the input as:

```
Enter key element : 56
```

then the program should print the result as:

```
After sorting the elements in the array are
Value of a[0] = 33
Value of a[1] = 56
Value of a[2] = 89
The key element 56 is found at the position 1
```

Similarly if the key element is given as **25** for the above one dimensional array elements then the program should print the output as "**The Key element 25** is **not found in the array**".

Fill in the missing code so that it produces the desired result.

Source Code:

 $printf("The Key element %d is not found in the array\n",k);$

printf("Value of a[%d] = %d\n",i,a[i]);

Test Case - 1 **User Output** Enter value of n : Enter element for a[0] :

Ent	cer element for a[1] :
15	
Ent	cer element for a[2] :
23	
Ent	er key element :
45	
Aft	er sorting the elements in the array are
Val	ue of a[0] = 15
Val	Lue of a[1] = 23
Val	Lue of a[2] = 25
The	e Key element 45 is not found in the array

Test Case - 2
User Output
Enter value of n :
2
Enter element for a[0] :
80
Enter element for a[1] :
39
Enter key element :
50
After sorting the elements in the array are
Value of a[0] = 39
Value of a[1] = 80
The Key element 50 is not found in the array

Aim:

Write a C program to implement **Fibonacci search** technique **Source Code:**

```
FibonacciSearch.c
```

```
#include<stdio.h>
void main()
  int a[20],i,j,n,flag=0;
  printf("Enter the size of an array: ");
  scanf("%d",&n);
  printf("Enter the %d array elements\n",n);
  for(i=0;i<n;i++)
  {
        scanf("%d",&a[i]);
  printf("Enter the element to be searched: ");
  scanf("%d",&j);
  for(i=0;i<n;i++)
        if(j==a[i])
          flag++;
          break;
  if(flag==1)
  printf("Element found at index: %d.\n",i);
  printf("Element not found.\n");
```

Execution Results - All test cases have succeeded!

Test Case - 1 User Output Enter the size of an array: 5 Enter the 5 array elements 3 4 5 6 7 Enter the element to be searched: 3 Element found at index: 0.

Test Case - 2

Srinivasa Ramanujan Institute of Technology 2022-2026-CSE-B

Aim:

Write a program to implement queue using dynamic array.

In this queue implementation has

- 1. a pointer 'queue' to a dynamically allocated array (used to hold the contents of the queue)
- 2. an integer 'maxSize' that holds the size of this array (i.e the maximum number of data that can be held in this array)
- 3. an integer 'front' which stores the array index of the first element in the queue
- 4. an integer 'rear' which stores the array index of the last element in the queue.

```
Sample Input and Output:
    Enter the maximum size of the queue : 3
    1.Enqueue 2.Dequeue 3.Display 4.Exit
    Enter your option : 2
    Queue is underflow.
    1. Enqueue 2. Dequeue 3. Display 4. Exit
    Enter your option : 3
    Queue is empty.
    1.Enqueue 2.Dequeue 3.Display 4.Exit
    Enter your option : 1
    Enter element : 15
    Successfully inserted.
    1.Enqueue 2.Dequeue 3.Display 4.Exit
    Enter your option : 1
    Enter element : 16
    Successfully inserted.
    1. Enqueue 2. Dequeue 3. Display 4. Exit
    Enter your option : 1
    Enter element : 17
    Successfully inserted.
    1. Enqueue 2. Dequeue 3. Display 4. Exit
    Enter your option : 1
    Enter element : 18
    Queue is overflow.
    1.Enqueue 2.Dequeue 3.Display 4.Exit
    Enter your option : 3
    Elements in the queue : 15 16 17
    1.Enqueue 2.Dequeue 3.Display 4.Exit
    Enter your option : 2
    Deleted element = 15
    1.Enqueue 2.Dequeue 3.Display 4.Exit
    Enter your option : 2
    Deleted element = 16
    1.Enqueue 2.Dequeue 3.Display 4.Exit
    Enter your option : 3
    Elements in the queue : 17
    1.Enqueue 2.Dequeue 3.Display 4.Exit
    Enter your option : 2
    Deleted element = 17
    1.Enqueue 2.Dequeue 3.Display 4.Exit
    Enter your option : 3
    Queue is empty.
    1.Enqueue 2.Dequeue 3.Display 4.Exit
    Enter your option: 2
    Queue is underflow.
    1. Enqueue 2. Dequeue 3. Display 4. Exit
    Enter your option : 4

Aim:

Write a program to create a binary search tree of integers and perform the following operations using linked list.

- 5. Insert a node
- 6. In-order traversal
- 7. Pre-order traversal
- 8. Post-order traversal

Exp. Name: Write a Program to Search an element using Binary Search and Recursion

Date: 2023-06-19

Aim:

Write a program to search the given element from a list of elements with binary search technique using recursion

At the time of execution, the program should print the message on the console as:

```
Enter value of n :
```

For example, if the user gives the input as:

```
Enter value of n : 5
```

Next, the program should print the following messages one by one on the console as:

```
Enter 5 elements :
```

if the user gives the input as:

```
Enter 5 elements : 33 55 22 44 11
```

then the program should print the result as:

```
After sorting the elements are : 11 22 33 44 55 \,
```

Next, the program should print the message on the console as:

```
Enter key element :
```

if the user gives the input as:

```
Enter key element : 11
```

then the program should **print** the result as:

```
The given key element 11 is found at position : \mathbf{0}
```

Similarly, if the key element is given as 18 for the above example then the program should print the output as:

```
The given key element 18 is not found
```

Note: Write the functions read(), bubbleSort(), display() and binarySearch() in BinarySearch.c Source Code:

```
BinarySearch.c
```

Aim:

Follow the instructions given below to write a program to open a file and to print its contents on the screen.

- Open a new file "SampleText1.txt" in write mode
- · Write the content in the file
- · Close the file
- · Open the same file in read mode
- Read the content from file and print them on the screen
- · Close the file

Source Code:

```
file1.c
```

```
#include<stdio.h>
void main() {
  FILE *fp;
   char ch;
   fp = fopen("SampleText1,txt","w");
   printf("Enter the text with @ at end : ");
   while((ch = getchar()) != '@') {
      putc(ch, fp);
   }
  putc(ch, fp);
   fclose(fp);
   fp = fopen("SampleText1,txt", "r");
   printf("Given message is : ");
   while((ch = getc(fp)) != '@') {
          putchar(ch);
   }
   printf("\n");
   fclose(fp);
}
```

Aim:

Write a program to reverse the first n characters in a file.

- open a new file "TestDataFile3.txt" in read/write mode
- write the content onto the file
- read the number of characters to copy
- copy the specified number of characters into a string
- · reverse the string
- overwrite the entire string into the file from the begining
- · close the file
- open the copied file "TestDataFile3.txt" in read mode
- $\boldsymbol{\cdot}$ read the text from file and print on the screen
- · close the file

Exp. Name: Write a C program to Append data to an existing File

Date: 2023-05-18

Aim:

S.No: 34

Write a program to append data to an existing file and display its contents.

- open a new file "DemoTextFile1.txt" in write mode
- · write the content onto the file
- · close the file
- open a new same file in append mode
- · write the content onto the file
- · close the file
- open the same file in read mode
- read the text from file and print them on the screen
- · close the file

Source Code:

```
appendDataToFile.c
```

```
#include<stdio.h>
void main() {
  FILE *fp;
  char ch;
   fp = fopen("DemoTextFile1.txt", "w");
   printf("Enter the text with @ at end : ");
   while((ch=getchar())!='@') {
          putc(ch,fp);
   fclose(fp);
   fp = fopen("DemoTextFile1.txt", "a");
   printf("Enter the text to append to a file with @ at end : ");
   while((ch=getchar())!='@') {
          putc(ch,fp);
   }
   putc(ch,fp);
   fclose(fp);
   fp = fopen("DemoTextFile1.txt", "r");
   printf("File content after appending : ");
   while((ch=getc(fp))!='@') {
          putchar(ch);
   printf("\n");
   fclose(fp);
